- **Databases:** Oracle, SQL Server, MongoDB
- **Front-End Skills:** HTML, CSS, javaScript, ReactJS, Bootstrap
- **Back-End and Database Skills:** MS SQL Server, Oracle, MongoDB

WORK EXPERIENCE   **Jan 2023 - APR 2023**

Full Stack Developer Intern, COMPUTER CENTRE, Vadodara 🔗
- Spent two weeks learning AngularJS for building dynamic web apps and ASP.NET MVC for creating web applications with a clean architecture using the Model-View-Controller pattern.
- In three months with a team of four, I developed a full-stack Helpdesk project with the following features: - Admin can manage staff and view query analytics. - Users verify their email to make queries, which support staff can address or forward to the appropriate team. Users can live track their query status.

PROJECTS

Real-Estate Website : 🔗
- Learning to create a React application that fetches data through the Bayut API from RapidAPI. The project involves integrating the API to retrieve real estate data, such as rental homes and properties for sale, and displaying it within the application. This process will help you understand how to make API calls, handle responses, and present the data in a user-friendly manner within a React app.

Recipe-Finder : 🔗
- A React application where you can search for recipes, view the results, and click to watch a YouTube video. You can also mark recipes as favorites, which will be displayed in the favorites tab.

FlappyBird : 🔗
- Learning frontend development with React and using KaboomJS to make a game for the first time. KaboomJS has prebuilt functions for gravity, backgrounds, and collisions.
